What Lives In A Shell? (Let's-Read-and-Find-Out Science 1)

Synopsis

A house is a home for you, a nest is a home for a bird, and a cave is a home for a bear. But for some animals a shell is a home. Snails and turtles and crabs and clams all have shells that act as their homes and protect them from harm. This Level 1 Let's-Read-and-Find-Out picture book is a fascinating exploration of the many creatures that make a home in a shell. Now rebranded with a new cover look, this classic picture book features rich marine vocabulary and beautifully accurate illustrations of the many types of shellsâinside and out! Young readers will love exploring the fascinating homes of creatures like hermit crabs, scallops, and turtles. Both text and artwork were expert-reviewed for accuracy. This is a Level 1 Let's-Read-and-Find-Out, which means the book explores introductory concepts perfect for children in the primary grades and supports the Common Core Learning Standards and Next Generation Science Standards. Let's-Read-and-Find-Out is the winner of the American Association for the Advancement of Science/Subaru Science Books & Films Prize for Outstanding Science Series.

This book was great to read to my 5-year-old grandson who lives near the ocean. He has seen lots of shells, now he knows more about them and where they come from - written plain and simple for

young kids to understand. He could even read a little of the book himself. Highly recommend this book - I even learned a couple things!

As a preschool teacher I find this book very interesting to 4 year olds. children loves to see the pictures and like to discuss the context.

My 6.5-year-old daughter has developed a keen interest in science and though these Stage 1 books are recommended for pre-school-K level kids, I thought they would make a nice introduction to science and that she would be able to read them independently. This title is an excellent way to get children to understand how shells can provide homes for all kinds of creatures such as snails, turtles, crabs, scallops, etc. It was interesting for my daughter to discover that whelks and conchs are types of snails that are only found by the seaside. I pulled out my collection of seashells and we had fun comparing the different kinds of shells to those portrayed in the book. The book is not only filled with interesting facts but lots of beautiful full-color illustrations that make for an educational and engaging reading experience.

I bought this for my soon to be 4-year old granddaughter. I have quite a few shells, and I thought, since she seems interested, it would be fun to have a book with the pictures of the shells and information about what lived in the shell. As it turns out, it is not what I expected, but is a very elementary story book, with nice artwork, with reference to turtles, snails, and very few ocean shells. Probably for someone much younger, though I'm not sure one much younger would be that interested in what had lived in a shell. The cover shows pictures of shells and the ocean, but it is really lacking for what we wanted. I ordered a Smithsonian book to fill the need.

This is a wonderful book that takes shell collecting to a greater depth. As you show a shell collection, use this book to illustrate to the children what used to live in a particular type of shell.

My 5 year old daughter loves these books. They teach the subject without being too complicated. I would recommend this book and others in the series!

Didn't want to miss the opportunity to learn just exactly what was under those hard, pretty shells we found at the beach with the grands. GREAT way to combine fun with information. Vacations can be an outgrowth of developing intellectual and scientific curiosities.

This book was very fascinating for my 4 year old. We took it on our beach vacation and she learned so much since she could see the things she was reading about. She has also wanted to read it since coming home. A wonderful book.
