[Science, Nature & How It Works](#)

Age Range: 5 - 10 years

Grade Level: Kindergarten - 4

## Customer Reviews

Finally! We are finding more non-fiction science books for young children. This book along with the others in the series (Amazing Science) by this author are well done. The illustrations are clean and simple. The text is appropriate for the younger child interested in science. This book is an excellent addition to a classroom library for preschool through 2nd grade.

I was hesitant to buy this book without getting to look inside first, but it turned out to be an excellent purchase. I read it to my 3- and 4-year-old daughters, stopping to do the activities suggested, such as making shadow puppets and looking at our reflections in spoons. There was no need for any preparation. The book is written in a clear, simple style, and I appreciated that it didn't have a textbook tone.

This book came recommended by my daughters Kiwi Crate, when they did the unit on Light and Shadows. This was a great explanation of light and shadows. Truly a worthwhile addition to our

homeschool library!

I am glad to get this book. Using literature to teach Science concepts really helps my students understand the concepts.

The book is great but a little much for my four year old Great Grandson. But my eight year old Great Grand daughter loved it.
