# Dinomummy

## Synopsis

In 2000, teenage dino-hunter Tyler Lyson stumbled across the fossil remains of a hadrosaur in the remote hills of the Hell Creek Formation in North Dakota. More than a collection of fossilized bones, Tyler discovered a three-dimensional mummified dinosaur—a "dinomummy." He and a paleontologist from the University of Manchester in England, Dr. Phil Manning, led an excavation that would change the way we think about dinosaurs. Named for its place of discovery, "Dakota" was gradually uncovered and moved to a lab for further excavation and analysis. Tyler and Phil's enthusiasm, expertise, and years of work blend as this paleontological detective story unfolds. Stunning computer-generated artwork, based on fieldwork and laboratory studies of the hadrosaur specimen, brings Dakota and its environment back to life on the pages of this amazing book. Travel back in time to explore Hell Creek 65 million years ago, when herds of hadrosaurs migrated across vast floodplains. Dakota died during the Late Cretaceous Period on the floodplains of North America and its body was locked in a rocky tomb. But Dakota's story was far from over. From the rugged badlands of Hell Creek to high-tech scientific labs, photographs document the incredible story of two men and a very special dinosaur.

## Book Information

Hardcover: 64 pages

Publisher: Kingfisher; 1st edition (December 4, 2007)

Language: English

ISBN-10: 0753460475

ISBN-13: 978-0753460474

Product Dimensions: 9 x 10.6 inches

Shipping Weight: 1.2 pounds (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars [See all reviews](#) (25 customer reviews)

Best Sellers Rank: #1,247,386 in Books (See Top 100 in Books) #99 in [Books > Children's Books > Geography & Cultures > Archaeology](#) #130 in [Books > Children's Books > Education & Reference > Science Studies > Nature > Fossils](#) #1397 in [Books > Children's Books > Animals > Dinosaurs](#)

Age Range: 9 - 11 years

Grade Level: 4 - 6

## Customer Reviews

My 9 year old granddaughter, interested in dinosaurs since she could walk, received Dinomummy

for Xmas. Our Santa handed it out---about the 3rd present she received. When she opened it, we lost her! She read the entire book as fast as she could, loved it and lost interest in other presents for a while. The pictures are stunning, as is indicated just looking at the cover. Wonderful book. Hallett Luscombe

My son loves this book. He carried it around on Christmas day like a trophy, and read it to his siblings right away. Now he wants the adult version to learn more.

This is a wonderful non-fiction book! Any child, (or adult for that matter,) interested in dinosaurs will find it amazing and full of information. A Hadrosaur, with nearly complete skin and soft tissue, was discovered in Hell Creek, North Dakota by a 16 year old who'd been fascinated with dinosaurs since he was 6. After he realized what he had found, he wrote an e-mail describing his discovery and including a picture, to Dr Manning, a paleontologist at the University of Manchester in the U.K.! An army of specialists soon surrounded the site. The book has pictures and descriptions of the recovery and moving of the mummy, and the results of the studies. At the end of the book, there are pages showing the Triassic, Jurassic, and Cretaceous dinosaurs, and also drawings and descriptions of the various fossils found at Hell Creek. It's also a beautiful, imaginatively bound book.

My son is interested in archaeology, and dinosaurs especially, and so is really enjoying this book. It's very well written and illustrated.

About half of this book consists of captivating illustrations of dinosaurs and the other half is photographs of the present day process of finding and analyzing fossils. The last few pages contain an illustrated glossary of dinosaurs. Certainly not an exhaustive list, but a nice spread. This book is aimed at young readers, I would guess in the 8-12 range, but even as an adult I find it interesting enough, mainly for the visual aspects. Our 2.5 year-old loves the illustrations and will listen to a "reading" of the book.

At the age of sixteen, Tyler Lyson made one of perhaps the most amazing discoveries when it comes to dinosaurs: a highly intact and detailed dinosaur mummy. Not just a fossil as many discoveries of dinosaurs are, this one came complete with actual dinosaur skin and possible organs! Although he had always been fascinated with dinosaurs, Tyler hardly knew at the age of six, when he discovered the fossilized jaw of a duck-billed hadrosaur along with his brother, that one day his

persistence and dedication would lead to such an amazing find. Tyler Lyson grew up in Marmarth, South Dakota, and spent a large amount of his time exploring the grounds of Hell Creek, a remote, huge area of badlands not far from where he lived. At sixteen, he discovered the dinomummy, who was eventually named "Dakota" for the state where it was found. He contacted Dr. Phillip Lars Manning, a paleontologist at the University of Manchester in the U.K., and the real fun -- and work -- began. Together with a large group of scientists from numerous fields and eager volunteers, Tyler and Dr. Manning set about uncovering this enormous and amazing dinomummy. We can follow their journey from head to tail through stunning full-color photographs included within the pages of DINOMUMMY. Dr. Manning also describes the techniques and equipment used to unearth, protect, and transport Dakota back to his lab for further study. For anyone who loves dinosaurs, DINOMUMMY is a must-read! This is a fascinating look into a truly important discovery, and its easy-to-read language and helpful illustrations and captions make it perfect for even the youngest reader. I picked up Dinomummy up from the public library for my son to enjoy. My son just finished reading it to me and then got out his dinosaur card game out to find all the dino's listed in the book. I enjoyed the book as much as he did!

Dinomummy was a gift for a 10 year-old boy whose name we got for an Angel Tree. My own 10 year-old son looked through it before we wrapped it and was impressed. The illustrations are beautiful and it's well-written.
