Age Range: 9 and up

Grade Level: 4 and up

## Customer Reviews

This was a pretty good book - I almost gave it 4 stars. The book has some useful info and the advice is sound (based on other 1st aid books I've read), so I don't think it would be a waste of anyone's money. The stated reading level is 9-12 but I felt it was a little too ambitious for most kids under 12 and too simple for kids over 12. I read this book to my 7 year old and most of it was over her head and had too many "steps". MY 12 year old also read it and she too thought there were too many "steps" in the instructions on what to do in an emergency. The sections in each chapter called "GET HELP!" were confusing to both kids. If you're looking for a Safety/1st Aid book for someone under 12 I would highly recommend "The Safety Book for Active Kids" (also sold by ). If the reader is someone over 12 then a Red Cross First Aid Course and an adult first aid manual might be a better use of your money.

My 5 year old son loves this book. It was written with an entertaining voice, but also gives the basic information needed to deal with the variety of physical troubles a little one might meet up with. I appreciated that the book covers first aid across geographical location. Even those areas that did not pertain to us, like the ocean or poisonous critters from the South, were interesting to read about. I'd never thought of the dangers of walking barefoot on the beach before (alas another romanticized image punctured, as apparently sea urchins or shattering coral can do). It covers: How to make a first aid kit  
Cuts and stings from sea life  
Bee stings  
Bites from a variety of poisonous and non poisonous critters  
Blisters  
Bloody noses  
Burns  
Choking  
Cuts, scrapes, bruises  
Objects in nose and ears  
Poisoning  
Poison ivy, oak, sumac  
Sprains and Strains  
and a few more  
We home school, and this book made a delightful study unit.

I have 2 young children (ages 5 and 9 yrs old) myself and helping them understand what happens to their bodies when they hurt themselves is tough to do. Not to mention what to do when they are injured. Sometimes it is more "scared about the unknown" than anything. This book really helps the child research and learn how their bodies tell them when they are hurt and how to take care of the simpler injuries themselves. Plus, the format of the book draws them into learning about their bodies before an injury occurs. The illustrations are funny and help drive the points home in a kids kind of way. Great book and my daughter is already trying out the different first aid techniques in advance. Teach the child and you have taught the adult forever!

When I ordered the book, I expected it to be all cute and colorful inside as it is on the outside. I'm so disappointed. It's a present for my daughter who's going to love it for the content, but I might let her color it in if she wants to (I'm pretty sure she will) because it looks too boring with just black and white. Why didn't they put colored cartoons in it? Like I said, disappointing.

This book is perfect for kids and not bad for adults either. It is very clearly written and has outstanding illustrations. The health strategies and tips provided are done in the context of prevention... But things happen, accidents occur, kids get hurt. This book helps you and your children learn/know what to do in these situations. A fun, interesting, read.

The book was almost brand-new although I bought it "used". It contains fun illustrations and simple language for elementary school children. I used sections of it to teach my girl scout troop about basic First Aid.

This book is packed with information in a style that is accessible to kids. It's out of print now, but if you want to teach your kids basic first aid, it's worth finding a used copy.

My daughter loves. It was better than expected as far as condition. It is very educative for elementary school kids.
