# The Underwater Alphabet Book (Jerry Pallotta's Alphabet Books)

## Synopsis

This familiar favorite in Jerry Pallotta's best-selling alphabet book series takes you underwater to explore the coral reef. From Angelfish to Zebra Pipefish, an alphabet of amazing tropical creatures leads us through this important ecological system. Vivid, color illustrations enhance a fact-filled, entertaining text which teaches the young and not-so-young reader about the fascinating life on the coral reef.

[Children's Books > Science, Nature & How It Works](#)

Age Range: 4 - 8 years

Grade Level: 1 - 3

## Customer Reviews

We had to buy a second copy (a hardcover) because our sons loved the first, paperback, version to death. Taught my kids not only the alphabet but the names of all the fish. I is for Indigo Hamlet was one of my son's first sentences! My four-year-old can i.d. all these fish at the San Diego aquarium (and wants us to find the others at another aquarium). Never boring for adults, unlike some alphabet books.

I bought this book because my class is studying oceans. I thought the book might be dull but I needed something and didn't find much else. I had already covered whales, dolphins and sharks.

So anyway I read it before bringing the book to school and found it entertaining and amusing. The book is not afraid to be funny. It really lightened up the subject and I can't wait to read it to my students. Thanks Jerry!

I can't say enough great things about these books. Jerry Pallotta has a unique take on the "ABC" type books you usually see for kids. These are not just for learning the alphabet (and probably actually not intended for that at all) but are more of an encyclopedia of quick facts about the subject matter. My 3-year old LOVES this one and the others that he has -- He points out the letters of course, but also now knows what a Riojasaurus is (from the Dinosaur version), too! My husband and I even have learned from reading these to him. Highly recommended for an "outside of the box" ABC book.

A wonderfully fun way to teach not only the alphabet, but fish, other sea life and a few of the mysteries of the world's coral reefs. The children I work with never fail to CACKLE and GUFFAW when I get to letter H, and the Humu-Humu-Nuku-Nuku-Apua.

The two and a half year old I purchased this for, was not interested in this book. He usually sits and loves to look at all kinds of pictures. I think the book will be good for him when he is about 3 1/2 or 4 years old or older and learning the alphabet

What a surprisingly funny and entertaining book! I found this at a local thrift store, and am so happy to have stumbled upon it. I can definitely see my four year old daughter and me reading it over and over again, and cracking up over the little humorous comments inserted here and there. Jerry Pallotta has written a non fiction book about the ocean creatures in a way that helps a student (and teacher) learn without even realizing it because they're having such fun! I highly recommend this for those who want to teach or learn about some interesting creatures in our magnificent oceans!

This book is amazing! I have been going on an annual Marine Biology Trip with my dad since I was little and now I am one of the teachers. The information in this book is great and I look forward to teaching/reading it to my daughter as she grows up. There is so much information in this book that we teach to the high school students on our trip! I think this is a great way to help my daughter get interested and excited about marine biology at a young age! Maybe one day she'll be a teacher on the trip too!

I thought this would be a good alpha book for younger students, but it is very wordy. Lots of good info, but too much for little ones. Would be better for 2nd or 3rd grade, but not for alpha. It would be better for science info for things that live under the sea.
