Megatooth

Synopsis

Meet Megatooth -- the giant prehistoric shark that was even bigger than T-rex! Ten million years ago, giant beasts walked the earth. But the biggest one of all did not walk -- it swam. It was large enough to eat whales. It was more enormous than the biggest dinosaur, Tyrannosaurus rex. It was Megalodon -- or Megatooth -- the giant shark, and it ruled the seas. Great White sharks may be huge, but their ancient ancestors were even bigger and more powerful. Scientists aren't sure how big Megalodons really were, since the only things they left behind were enormous teeth. But teeth can tell us a lot. Filled with fascinating facts and gorgeous, highly detailed illustrations, this book will thrill dinosaur and shark fans alike.

Book Information

Lexile Measure: AD730L (What's this?)

Hardcover: 32 pages

Publisher: Henry Holt; 1st edition (June 1, 2001)

Language: English

Age Range: 4 - 8 years

Grade Level: Preschool - 3

Customer Reviews

MEGATooth is a great childrens book about the most terrifying creature that ever lived. Imagine a Great White shark the size of an adult Humpback whale- weighing 40 to 70 tons having 6 to 7" triangular, serrated teeth and no known predators!! MEGATooth describes this frightening animal of the past with paintings done by the author and informative text about how this huge shark lived and what it ate. MEGATooth would make a great Birthday or Christmas gift for that young shark lover out there and i can't imagine any little boy or girl who loves dinosaurs not loving this book as well!

My 4 year old has been OBSESSED with sharks lately and when he heard of this magical beast named Megalodon...well I had to find more on it. We love this book, great illustrations and concise text keeps his attention and is a "short" bedtime read.

great book. a bit more beaten up than I was expecting, but not un-readable. being a library book before explains a lot.
