Age Range: 9 and up

Grade Level: 4 and up

Customer Reviews

I did not like this book and liked it at the same time. The reasons why i liked it are for the beautiful detailed pictures and small little tidbits on each subject. However i did not like this book because it is not at all like i expected it to be. It says "encyclopedia of science." When something says encyclopedia, you expect it to be like one. It however is simply It has 58 topics with a small amount of information on each. Ya okay its great for a kid but i intended to use it as an encyclopedia for a child, not a "fun" book. Great book just misleading.

The Usborne internet linked First Encyclopedia of science is a great book. I am actually basing my first grade homeschool curriculum around it. It has more subject areas than the typical first grade science textbook but they are all written about in a way that's easy to understand for kids. The pictures grab kids attention and keep them focused and interested in the subjects. The best part

about this is that it is internet linked. What that means is that if you are really interested in a subject in the book and you want to learn more than what is provided, you can go to the internet links and learn more for free. My daughter was so excited when I got this book in the mail. We have only covered a few topics in it so far but I have read the whole thing and I really think that this is a great first science book for kids. It is not boring and does not seem like a typical blah blah blah textbook, instead it is full of fun facts and colorful and educational pictures. This is a must have for any child's library. Actually so are all the Usborne books in my opinion. I am definitely collecting them.

Great resource for my 4th grader! Bright pics and good explanations for him. I love, love, love Usborne books and this one rounds out our Usborne science book collection nicely! It has two more kids to go through and I hope they love it as much as my 4th grader!

Wonderful science book/Encyclopedia for 2nd graders. Informative. Pictures and colors are so wonderful my kid is amazed when he sees the pictures. Love the Links to webpages features.

Very cool! My little guy LOVES it & we're planning on using it with our science curriculum for homestudy
