Linux has grown tremendously in the server Operating System market, primarily due to the fact that it is stable and secure. But this growth has been restricted to the bigger corporates, with server farms and data centers, who have the resources to hire former Unix sysadmins and get high-priced

consultants to manage migration of their existing IT infrastructure to a Linux-based one. Small and Medium Enterprises till now have generally remained Microsoft customers, because quite often, there is no specialized IT department in such organizations, and Microsoft's server products have GUI interfaces that make it easy for laypersons to set-up and administer services. Besides, Microsoft has tightly integrated services, like Active Directory and Exchange, which is a further incentive to use Microsoft server products. However, the proliferation of security issues, stability issues and the high cost of user-licenses have forced quite a lot of the SMEs to explore the possibility of using Linux to replace most, if not all the Microsoft server software. IT consultants catering to the SME market are also facing queries from their clients regarding the hype surrounding Linux, and the possible advantages of switching to Linux. The book "Windows to Linux Migration Toolkit" is aimed at this SME segment that is exploring ways to cut costs by switching to Linux. The book is divided into 11 chapters and 3 appendices, which cover almost all the major services used by SMEs today. Chapter 1 deals with the planning the roadmap and, keeping its target audience in mind, introduces us to the migration roadmaps of two fictional SMEs : Acme Widgets Manufacturing Inc. and Ballystyx Global Semiconductor Engineering Inc.
